

# CONNECTINGCARE: SECURE MESSAGING

A web-based secure messaging system to transmit eReferrals, service requests and coordinate care.

ConnectingCare is a fast convenient way for mobile healthcare providers and community agencies to securely exchange electronic referrals, service requests, feedback, care coordination plans and more.

### Compliant

ConnectingCare is a certified SMD intermediary and complies with the national eHealth strategy

### Supported

Comprehensive support is provided for ConnectingCare

### Proven

The advantages of this secure, confidential system have been proven over a decade by HACC service providers, community health centres, allied health providers and hospitals

### Practical

Whether you're working with clients off-site or in your practice this integrated system puts healthcare and community services at your fingertips

### Integrated

Links to the National Health Services Directory

### Secure

PKI encryption to ensure confidential receipt by the correct recipient

ConnectingCare v6 can improve the quality of referrals and provider communication, optimising the client journey through the healthcare system. Now featuring the new interoperable standard, FHIR, providers can dynamically define form requirements and thereby reduce administrative delays. ConnectingCare v6 will also offer:

- Wider, national user base
- Argus endpoint interoperability
- Improved user interface and simplified workflow process
- Control over user accounts
- Responsive design
- SCTT12
- Richer content through attachments
- Logged messaging with an audit trail
