

ENTERPRISE HEALTH PROVIDER DIRECTORY

All your provider information in one place

HOW HEALTHY IS YOUR PROVIDER INFORMATION?

Easily store and update all your vital provider information in one place with your own customised Enterprise Health Provider Directory that integrates with the National Health Services Directory (NHSD).

Connecting your health data

The Enterprise Health Provider Directory lays the foundation for data interoperability between health systems, by providing your organisation with access to reliable and consistent information about health service providers. The directory connects your organisation to health registries including the NHSD, delivered by Healthdirect Australia.

With the Enterprise Health Provider Directory, you can create and maintain organisation-specific records and data fields to suit your needs. This provides an enriched dataset for your organisation with consistent, accurate and comprehensive information about providers, when you need them. You can also optimise workflows and reduce duplication by updating your directory once and having the details reflected across all your connected systems through bidirectional updates.

A single source of truth

Designed specifically to support clinicians, hospitals, private health insurers and diagnostic services, the Enterprise Health Provider Directory makes it quicker to locate providers and exchange critical clinical documentation, reports, discharge summaries and referrals. With address details that are up to date, you can be confident that essential health information can be dispatched to the right person and location.

A reliable solution from trusted experts

The Enterprise Health Provider Directory uses the internationally recognised Fast Healthcare Interoperability Resources (FHIR) standard created by HL7, and is delivered by HealthConnex, a Telstra Health business. HealthConnex has over ten years' experience in health directories, having developed the international health services directory specification ServD in conjunction with the Object Management Group, and actively contributes to the development of FHIR. Using standards to define the interfaces that applications and web portals can use to search, retrieve and maintain service and provider information ensures data interoperability.

About Telstra Health

The way health is delivered is changing. Telstra Health is leading that change. Regardless of the role you play in the healthcare system, our goal is the same - we want to make healthcare easier for you. We want to deliver a better experience, lower costs and increased convenience. We want to make healthcare simpler for everyone.

BENEFITS

- Reduce reputational and clinical risk by helping ensure the correct distribution of critical clinical documents
- Improve patient care through better communication with external and internal stakeholders
- Reduce cost and duplication of effort with a single source of truth for provider information
- Save time by easily adding and updating directory information essential for your organisation's day-to-day operations
- Improve efficiency by building on the NHSD and other trusted data sources
- Support current and future system integration with a standards-based solution
- Assist in making informed decisions through enriched reporting.
